Quick service

Giga4

Giga4 new generation EPOS system with enhanced 3D graphical and intuitive interface has all benefits of high end PC solution with rock solid reliability of a flash ROM based system without the system lock-ups of PC.

Exceptional power, style, speed and simplicity at the point of service.

The Giga Hospitality Terminal is the latest model in a range of point of sale terminal has all the hospitality features you could want in a rugged, good-looking housing that enhances the ambience of any location.

- Graphical table plan with highly customizable 3D restaurant layout, with table status.
- Colourful 3D pictures of menu items with incredible speed which increase efficiency and simplify daily operation.
- Graphical recall transaction and multi function bill separation menu
- Table billing option include splitting bill, table transfer, multiple bill per table, per guest and shareable items.

- Multiple Kitchen control supporting serial, ethernet printers and KDS (Kitchen Display System) including auto trasmission to different kitchen printers, with auto backup and redirection in case of trouble.
- Full restaurant features include multiple level course, hold and fire, multiple price list, french menu, combo menu, mix and match and floating operators.

- Network capability with redundancy data over standard TCP/IP communication up to 32 terminals, including reporting and product maintenance.
- BackOffice PC communications and internet access provide essential data to enable management to make smart business decision.

12 different interchangeable colored rubber side. Perfect matching with restaurant design or in-store furniture

- BackOffice includes inventory control, purchasing control, menu costing, receipt costing, employee time keeping, accounts receivable and sales tracking.
- BackOffice is internet based so can manage the system from head office or from home.
- Integrated Bluetooth Technology, Long Range, for use with NANO hand held terminals, sending orders directly from table to kitchen and bar, to provide better service with less effort and fewer servers.
